

## TECHNOLOGY AND INNOVATION

## We partner with government on their journey to compliance

“  
**Assisting organisations to create a programme of governance and risk management**

### IT Governance

Sebata assists organisations to create a programme of governance and risk management that integrates their business activities and technologies to drive process efficiency. With the right structure, processes and automation, organisations can streamline their compliance process, and derive value from it.

To ensure your organisation is not undermined by legal violations, data theft or financial fraud, we also help organisations abide by the relevant laws and regulations while observing contractual obligations and internal guidelines.

IT governance goes hand-in-hand with PoPI compliance. Without IT governance, an organisation cannot function optimally.

### Are you PoPI Compliant?

The Protection of Personal Information (PoPI) Act is expected to happen before December 2018. Local businesses, including government entities, are well advised to start looking at how they acquire, process and store personal information ahead of time.

One key purpose of the POPI Act is to ensure all data controllers perform in exactly the same way in looking after data and its data subjects. We help organisations discern what is considered to be personal information and how the new Act expects businesses to operate.

# Sebata hosts **national workshops** in which our industry partners provide clarity on **IT and PoPI compliance**

## Custodians of private information

As an organisation, you are entrusted with sensitive information. Anything from payslips, employment history, contracts, residential details and the like – that is captured and processed – is subject to PoPI regulation. We help organisations ensure that the data at their disposal is not exploited but handled with the strictest confidentiality.

## Book a compliance workshop

Sebata hosts national workshops in which our industry partners – all experts in their respective fields – to provide you with clarity on what is considered to be personal information as well as offer insightful information on IT governance, and practical steps towards becoming PoPI compliant.

Our consultation covers the following focal points:

- The challenges faced by local government in achieving compliance and the practicalities of implementing a PoPI compliance programme
- How to report data breaches
- How to tackle the wide range of compliance challenges that PoPI will bring
- The repercussions for not being PoPI compliant
- Implementing processes and procedures of systems in the various organisational divisions so as to avoid security risks, such as cyber-crime

## We are Windows accredited

We help organisations abide by industry standards and government regulations; and in so doing, protecting the organisation, its employees, assets and revenue streams.

Sebata also offers the following IT services:
